

Arsenic and E. coli can be found in Fraser Valley wells Don't wait! Test your well today!

- Find out if your water is safe to drink from a government certified water testing lab, right here in the Fraser Valley.
- Fraser Health and many municipalities trust us to test their water samples.
- We will test your water and send you a report that shows how your water compares to the current Canadian Guidelines for Drinking Water.
- We can also give you information on how to treat any problems in your water.
- Experienced client services staff available to answer your questions.

Discounts available for well monitoring groups and real estate deals.

We offer extended hours
(7 am-6pm M-F
and 10am-2pm Saturday)
and free sampling bottles
for your convenience.

Water testing includes the following:

- a full metals scan, including arsenic, lead and iron
- bacteria testing for coliforms and E. coli
- additional tests for elements such as sodium, nitrate from fertilizer run off, and hardness
