

GE Merlin Tankless RO System

Breakthrough technology
Up to 720 gallons per day
No storage tank required!
Made in USA

Merlin Reverse Osmosis Drinking Water System

GE Infrastructure Water and Process Technologies has achieved a revolutionary breakthrough in the water treatment industry. Out-of-the-box thinking and years of research have produced a totally new point-of-use drinking water system. The new Merlin RO System features continuous-flow water production so a storage tank is no longer required.

The unit operates on line pressure, which eliminates the need for an electrical pump in most applications. The patented high-production, low-energy membrane purifies up to 720 gallons of water per day! This high capacity performance creates new opportunities for commercial applications at the price of a residential system.

- Continuous flow - no storage tank necessary
- Uses line pressure only - >40 psi
- 1/2 gpm permeate rate @ 50 psi
- Requires no pump or electricity
- Compact design - fits easily under sink
- ANSI NSF 58 validated
- Consistent TDS rejection and membrane efficiency
- High recovery system
- Multiple dispensing locations off one system
- High durability Noryl and polypropylene construction provide years of dependable service
- Engineered for the fewest number of connection points - less chance of leaks
- System's support leg also serves as a handy sump wrench
- 3 year Residential Warranty; 1 year Commercial Warranty
